

ACENTUAL COLOUR COMPACT

ACENTUAL allows to generate accent scenes in architectural elements such as bridges or buildings thanks to its adaptable anchoring system. Lighting through small dimension light sources is key to emphasize and embellish architectural spaces and the urban environment while maintaining their essence. It incorporates the APS® – Argon Pressurised System optical module pressurized with argon gas in an inert atmosphere, IP68 sealing equipment and an advanced heat dissipation system in AL5754 anodized aluminum. In addition, the optoelectronic LED COLOUR COMPACT® multi-configurable optoelectronic technology with 4-channel DMX control system, allows the adaptation of its vitrified optics to any color of the RAL chart.

Technical data sheet
